

Und die 'Wirtschaftlichkeit'? Zahlreiche Untersuchungen zeigten immer wieder, dass der moderne Mainframe die bei weitem niedrigste Total Cost of Ownership (TCO) aller Server-- Plattformen hat. So liegt laut den Analysten von At Kearney (2001) die TCO bei zentraler Mainframe-Architektur lediglich zwischen 3100 und 5100 Dollar, während sie sich bei zentraler Unix-Server-Architektur zwischen 5300 und 6700 Dollar und bei dezentraler Unix-Server-Architektur sogar zwischen 7000 und 9000 Dolia bewegt.

COMPUTERWOCHE 15/2002

<http://www-03.ibm.com/servers/eserver/zseries/library/literature/papers.html> ;

“Since we published our last high-level perspective of the ratio between MIPS and head count in 2001, the largest z/OS installations have more than doubled their ‘MIPS to head count’ ratio.” *L. Mieritz, M. Willis-Fleming – Gartner, 2004*

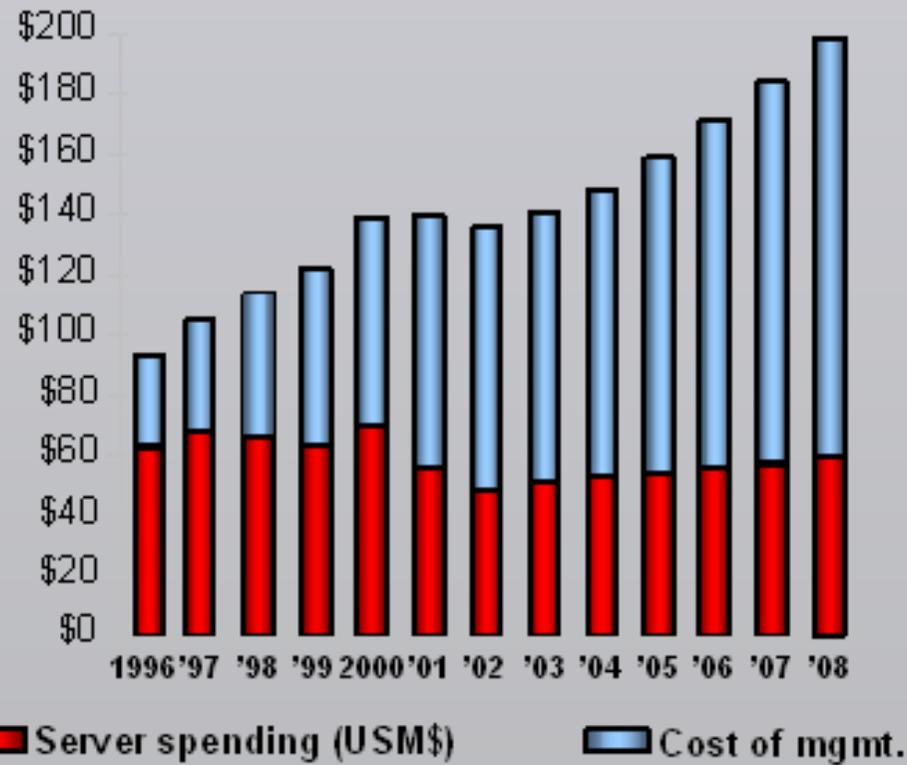

Predicted average cost per end user in 2010:

- **Mainframes \$6,250**
- **Unix Minis \$19,000**
- **PC Servers \$24,000**

Research and Development

IBM spends \$1.2 billion a year investing in the System z stack--including hardware, software, and services.

About 65 percent of the revenue that comes from the mainframe base comes from software, and not surprisingly, about 65 percent of that \$1.2 billion in annual investment in research and development for the mainframe line goes into software
