

Semblogging with Topic Maps

- Motivation
 - smart content aggregation of blog entries needs more semantics than just tag clouds
 - see e.g. Jack Park's elaboration on tagging in his „just for me“ paper
 - Semblogging as a special case of semantic annotation in line with DKM (Distributed Knowledge Management)
- Prior work
 - seminal work by Cayzer (RDF semblogging concept and prototype), citing the XTM book
 - redo it, and even better with Topic Maps!
 - ideas by Jack Park (on semblogging as an example for Augmented Storytelling)
 - idea of Dmitry Bogachev. Prototypical OKS semblogging application by Lars Marius Garshol
- Current work
 - Developing some Use Cases
 - One student implementing in his diploma thesis a prototype coupling blojsom with tmapi and TM engine
 - Further work under way looking more into distributed aspects and semantic web services
- What to Semblog about? (Communities I might want to look into)
 - Topic Mapping
 - bibMap or the Topic Map Research and Applications Landscape?
 - all TMRA05 participants and community semblogging on Topic Maps? SemWikiBlogging?
 - Learning process in a teaching course in information and knowledge management?
 - Cultural heritage (see blog entry <http://asigel.blogspot.com/2005/10/semblogging-use-case-40000-digital.html>)
- **Your ideas? Who is interested in what? Who will contribute what?**
